## DISC VALVES

model: **ADV**

### CONSTRUCTION:

**Frame and disc:** Steel sheet construction.

**Mounting rings:** Galvanized sheet steel.

### Description:

- Frame and disc is made of high quality steel sheet construction with powder coating to RAL colours.
- Disc is attached to the frame by threaded rod.
- Air flow can be adjusted by regulating the cone up or down (+A or -A)
- Foam gasket is sealed around the back of the frame to avoid air leakage.
- These valves can be used for supply, exhaust and ventilation applications.
- Air master disc valves are best suited to air distribution systems handling relatively low air flow rates.
- Can be mounted in wall, ceiling or exposed air ducts with mounting rings.
- Recommended for exhaust of greasy and damp air in areas such as toilets, bathrooms and kitchens.

### Standard finishes:

- Steel sheet powder coated to RAL 9010 colour.
- Flexibility of finish is available as option.

### ADV

### Position of the Disc

### Standard size & Dimensions

| Size | A   | B   | C  | D     |
|------|-----|-----|----|-------|
| 80   | 115 | 62  | 42 | 77.5  |
| 100  | 138 | 75  | 40 | 97.5  |
| 125  | 164 | 100 | 46 | 122.5 |
| 160  | 211 | 130 | 54 | 157.5 |
| 200  | 248 | 158 | 63 | 197.5 |

### Fixing details:

- Step-1. Mounting ring has to be fixed into the duct.
- Step-2. The frame can now be fixed into the mounting ring.

### Product Order Checklist

- Model
- Size
- Quantity
- Colour (RAL 9010 standard; other RAL colours are available on request)

### Performance data:

**Table 9.1 Supply air volume Vs Throw in meters for (A = 0)**

#### Note:

- For position A = +10, reduce throw by 30%.
- For position A = -10, increase throw by 40%.

- P<sub>t</sub> = Total pressure loss across the disc valve in mm of H<sub>2</sub>O.
- NC based on a room attenuation of 10 dB.
- A = +10, 0 & -10 represents position of the disc 10 mm below normal position, at normal position and 10 mm above normal position.

### CONSTRUCTION:

**Frame and inner cones:** High quality aluminium construction.

**Damper frame and blades:** Steel sheet with black matt finish.

### Description:

- Frame and inner cones are constructed from high quality aluminium sheet.
- Inner cones fixed rigidly to the frame.
- The standard butterfly damper in supply diffuser can be easily adjusted through the face of the unit by means of screw drive or by means of a simple hook. Please refer Fig:1 & Fig:2.
- The diffuser can be used for ceiling or exposed duct mounting and has a fixed horizontal air pattern.
- Foam gasket is sealed around the back of the frame as option to avoid air leakage.

### Standard finishes:

- Aluminium construction with white powder coated finish (RAL 9010).
- Powder coated colour finish as per other RAL colour codes available as option.

|     | D   | N   | E   |
|-----|-----|-----|-----|
| 160 | 263 | 223 | 150 |
| 200 | 313 | 273 | 200 |

- Neck size is measured in m/sec.
- P<sub>s</sub>: Static pressure loss in mm of H<sub>2</sub>O.
- Throw (meters) is measured for a terminal velocities of 0.25 & 0.5 m/sec.
- Noise criteria (NC) based on a room attenuation of 10 dB.

**Option : Fixed round ceiling diffuser with removable core****Model : ARD-FRC**

- Constuction is same as ARDF with removable inner Cone
- Inner cones fixed to the frame with aluminium pins loaded with steel springs. Inner cones can be easily removable and interchangeable to allow or maximum flexibility in installation, maintanance and adjustment.

### CONSTRUCTION:

**Frame & inner cones:** High quality aluminium sheet as standard. Steel construction as option.

**Damper frame and blade:** Steel sheet with black matt finish.

### Description:

- Frame and inner cones are made of high quality aluminium sheet construction with the advantages of corrosion resistance and rigidity.
- By means of its inner adjustable cones, air pattern can be adjusted from horizontal projection to vertical projection.
- Inner cones are fixed centrally to the frame. Cones can be easily removed and fixed. This provides easy installation, maintenance and access to the duct.
- The butterfly damper in supply diffuser can be easily adjusted through the face of the unit by means of screw driver after removing the inner cones.
- Discharge pattern can be adjusted for horizontal flow by extending the cones and for vertical flow by retracting the cones.
- Can be used for ceiling or exposed duct mounting especially in installation when an adjustable pattern is required.

### Model - ARD:

Construction is same as ARD+D without butterfly damper.

| ARD | N in mm | A   | B   | C    | D   |

| 450 | 445     | 820 | 866 | 20   | 147 |
| 500 | 500     | 880 | 940 | 22   | 160 |

### Standard finishes:

- Aluminium construction with white powder coated finish (RAL 9010).
- Steel construction with white powder coated finish (9010).
- Powder coated color finish as per other RAL colour codes available as option.

- Nominal size.
- All the dimension are in mm.

- Neck size is measured in m/sec.
- P<sub>s</sub>: Static pressure loss in mm of H<sub>2</sub>O.
- Throw (meters) is measured for a terminal velocities of 0.25 & 0.5 m/sec.
- Noise criteria (NC) based on a room attenuation of 10 dB.

# ROUND CEILING DIFFUSER FIXING DETAILS

## 1. ARDF

## 2. ARDF+D

**Option 1 : Hook operated damper**

**Option 2 : Screw operated damper**

## 3. ARD & ARD+D
